

Children's Treatment Network
OF SIMCOE YORK

Network Services Overview

Additional Rehabilitation, Clinical and Specialty Services Funded by Children's Treatment Network

Children's Treatment Network Partners provide a wide range of healthcare, recreation, education and community services for children with special needs – at home, in school and throughout the community.

Some of these children may have complex physical, developmental and/or communication needs. In order to provide more effective support for these children, additional funding from Children's Treatment Network was invested to expand the range of services provided by Network Partners so families have access to a continuum of rehabilitation and clinical services as well as specialty services.

Eligibility

Children with long-term multiple special needs residing in Simcoe or York, from birth to age 19 (or up to age 21 if attending school) who require treatment and/or support from multiple service providers are eligible for:

- 1 The Network's Coordinated Single Plan of Care Approach** which includes:
 - ACCESS and Service Navigation to all services and supports available across the Network
 - A shared Electronic Record
 - Support for development of Child & Family teams
- 2 Additional Rehabilitation and Clinical Services** funded by Children's Treatment Network. Funding has expanded local team services for kids with multiple complex physical, developmental and/or communication needs who require additional support by adding more professionals and clinicians who work within Network Partner organizations. *For complete Eligibility information see **Network Services Overview** sheet (behind).*
- 3 Specialty Services funded by Children's Treatment Network**
The infusion of additional professionals and expertise allows Network Partners to bring specialty services required by some children with multiple complex physical, developmental and/or communication needs closer to home.
The need for these services is explored when the Child & Family team determines that more specialized support and treatment approaches are needed to address complex needs.
